Jayllan Abecia

Cloud & DevOps Engineer | Azure · AWS · GCP

Melbourne, VIC | 0456 365 216 | jabecia23@gmail.com **LinkedIn:** linkedin.com/in/jayllan-abecia **Website:** jayabecia.com

PROFESSIONAL SUMMARY

Cloud & DevOps Engineer with 5+ years of experience across Azure, AWS and Google Cloud, holding the Azure DevOps Engineer Expert (AZ-400), Azure Solutions Architect Expert (AZ-305) and Google Professional Cloud Architect certifications. Specializes in Infrastructure as Code with Terraform, CI/CD automation, monitoring with Prometheus and Grafana, and cloud cost optimization. Reduced application deployment time by 80% through automation and standardized infrastructure with reusable Terraform modules. Experienced in Kubernetes (k3s), server hardening and database administration, and works well with vendors and cross-functional teams to keep systems reliable and secure.

EDUCATION

Master of Information Technology | 2024 - 2025

Torrens University Australia

Bachelor of Science in Information Technology | 2014 - 2018

University of Southern Philippines

PROFESSIONAL EXPERIENCE

Database, Application & DDoS Administrator | Feb 2024 – Present

Bitxify Pty. Ltd.

Key responsibilities:

- Manage cloud-based systems and services across AWS and Microsoft Azure environments.
- Monitor, troubleshoot and resolve database, application and infrastructure-related incidents.
- Administer SQL Servers and PostgreSQL environments, supporting performance reliability and integrity.
- Manage deployments and collaborate with internal teams and third-party vendors to resolve issues.

Key Achievements:

- Developed IIS and Windows Services deployment scripts, reducing application deployment time by 80% and improving deployment consistency.
- Implemented Prometheus and Grafana monitoring, providing improved visibility into system and application performance.
- Created initial server configuration and dependency installation processes for new Windows Servers, reducing manual setup effort and improving deployment readiness.
- Spearheaded the implementation of Azure & AWS Savings Plans, analyzing cloud usage and identifying opportunities to optimize compute costs and improve overall cloud expenditure.

Cloud Engineer | Oct 2022 – Dec 2023

QBE Insurance

Key responsibilities:

- Develop and maintain Infrastructure as Code (IaC) using Terraform to enable consistent, scalable and repeatable cloud deployments.
- Build, maintain and optimize CI/CD pipelines for infrastructure and application deployments.
- Monitor cloud environments and troubleshoot infrastructure, deployment and configuration issues to maintain system reliability and availability.

Key Achievements:

- Developed reusable Terraform modules for Azure Web Apps and Container Apps, improving deployment consistency and reducing the effort required to provision cloud resources.
- Developed an automated Azure subscription quota management script, reducing manual administration and improving the efficiency of subscription resource management.

DevOps Sysadmin | May 2020 – Feb 2022

Innovuze Solutions Inc.

Key responsibilities:

- Managed and supported cloud infrastructure, servers and apps, ensuring availability, reliability and stability.
- Managed CI/CD pipelines and automated workflows to improve app delivery and deployment reliability.
- Designed and deployed cloud infrastructure using Terraform, promoting repeatable and consistent infrastructure provisioning.
- Implemented server hardening and security controls to strengthen security and reduce vulnerability exposure.

Key Achievements:

- Introduced reusable Terraform modules, standardizing infrastructure provisioning and improving the consistency and efficiency of cloud deployments.
- Implemented SAST and vulnerability scanning using Mend and Trivy within CI/CD pipelines, enabling automated security checks and earlier identification of software and container vulnerabilities.
- Spearheaded the implementation of Azure Savings Plans, analyzing cloud usage and identifying opportunities to optimize compute costs and improve overall cloud expenditure.

CORE COMPETENCIES

Technical Skills

- **Cloud & Infrastructure:** AWS, Microsoft Azure, Google Cloud, cloud resource administration, infrastructure optimization.
- **DevOps & Automation:** CI/CD, Jenkins, Terraform, Ansible, Docker, Kubernetes (k3s), Git, deployment automation, infrastructure as code.
- **Systems & Applications:** Windows Server, Linux (Debian), application support, environment management, troubleshooting and incident resolution.
- **Database Administration:** Microsoft SQL Server, PostgreSQL, database monitoring, performance, reliability and data integrity.
- **Security & Resilience:** Server hardening, security controls, vulnerability remediation, DDoS protection and risk reduction.
- **Monitoring & Operations:** Prometheus, Grafana, system monitoring, performance optimization, technical documentation, testing and operational reporting.
- **Stakeholder Collaboration:** Technical communication, vendor coordination, cross-functional collaboration, user support and knowledge sharing.
- **Continuous Improvement:** Process automation, workflow optimization, infrastructure standardization and operational improvement.

CERTIFICATIONS

- Microsoft: DevOps Engineer Expert (AZ-400) — Jan 2026
- Microsoft: Azure Solutions Architect Expert (AZ-305) — Dec 2025
- HashiCorp Certified: Terraform Associate (003) — Jan 2025
- Microsoft: Azure Administrator Associate (AZ-104) — Dec 2024
- Google Professional Cloud Architect (GCP PCA) — Oct 2024
- Google Associate Cloud Engineer (GCP ACE) — Sep 2024
- Microsoft: Security, Compliance, and Identity Fundamentals (SC-900) — Feb 2023
- Microsoft: Azure Data Fundamentals (DP-900) — Sep 2021

PROJECTS

Bare-Metal k3s Kubernetes Cluster (Debian, Ansible, Prometheus & Grafana) - https://jayabecia.com/blog/back-to-on-prem-part-1

- Built a 3-node bare-metal Kubernetes home lab on Dell OptiPlex hardware, covering hardware selection, network wiring and Debian 13 installation on every node.
- Automated node updates, security hardening and a 3-node k3s cluster bring-up with a single Ansible playbook, making the full build repeatable from one command.
- Deployed the kube-prometheus-stack (Prometheus and Grafana) on k3s from one script, with persistent storage, a locked-down Grafana and Kubernetes network policies.
- **Problem It Solves:** Always-on cloud lab environments carry ongoing compute costs and a complex security surface. Running the cluster on low-cost on-prem hardware I fully control cuts that cost and keeps the environment easy to secure, manage and rebuild.

Serverless Jenkins CI/CD Pipeline (AWS & Terraform) - https://github.com/abeciaj/aws-ecs-jenkins

- Architected and deployed an automated, serverless build infrastructure on AWS ECS Fargate using Terraform, eliminating fixed compute overhead and single-point-of-failure risks.
- Implemented multi-AZ persistence with AWS EFS to decouple job data from container lifecycles, designed for high availability with multi-AZ persistence.
- Containerized custom Jenkins Controller and Agent runtimes via Docker and AWS ECR, optimizing build environment isolation and enabling dynamic agent scaling.
- **Problem It Solves:** Traditional Jenkins setups rely on 24/7 dedicated servers that waste compute costs during idle time and risk data loss during outages. This serverless architecture dynamically provisions build resources on demand while backing data up to resilient cloud storage.
